Page 5 of 37 Print ID: 202582914260962

Read the following passage and answer the questions that follow.

Trust me, you don't want to get caught under a tsunami! Tsunamis are one of the world's most powerful natural forces. They can swallow up islands in minutes. They can flood and destroy villages. They can create huge amounts of damage. But do you know exactly what a tsunami is? They are huge, mighty waves in the ocean that grow as they reach the shore. Most tsunamis are actually caused by earthquakes. When the ocean floor moves due to an earthquake, it creates big holes. The water floods in to fill these holes. When the water moves that quickly, it creates a huge wave. This is how tsunamis are born! Other natural disasters like landslides, volcanic eruptions, and glaciers breaking off can also cause tsunamis. Once the water starts moving because of the force of the disaster, large waves begin to ripple out. These waves can move very fast.

waves begin to ripple out. These waves can move very fast.			
Though tsunamis can happen anywhere, they usually occur in splike Japan, Chile, or even the United States are more at risk. The Alaska. The massive wave was over 1720 feet tall and wiped out	biggest tsunami e	ever recorded happened in 1958, in Litu	
What is a tsunami?			
Please mark (✓) for the correct answer.			
A. Huge ocean waves	B. Earth	nquake caused waves
